

Complete suit disposable (limited life use) material

Description

Complete suit disposable (limited life use) material

The Matcon line of air supplied protective clothing is a result of long research and developments. Independent studies / tests meet the stringent requirements of European CE regulations. The range consists out of a; hood, half suit (blouse) and full suit.

The line of clothing is made in a wide range of materials and laminate-coated fabric in order to provide protection against chemical liquids, gases, dust, aerosols and radio active particles protection. The air system provides the whole suit of air. A wide panoramic visor flexible or rigid visor possibly with an additional cross visor. The spacious main area offers plenty of freedom of movements and maximum visibility. All suits contain sufficient exhalation valves so that an excess pressure vented and that a pressure remains within the suit. In this version (complete suit disposable (limited life use) material), it is possible to easily change the air system to a new suit.

The suit is equipped with fixed arms / sleeves connected and is a cuff system for the exchange of the gloves. Also the legs are fixed connected in order to realize a complete suit. Per minute 55 liters of cool air supplied to each arms and legs for ventilation.

The suits are user friendly to work with and developed for practical use. We also have a [reusable version of a Complete suit](#).
