

Cygnus Underwater

Description

Cygnus Underwater is a tough portable multiple echo Ultrasonic Thickness Measurement Gauge designed for use by divers undertaking subsea maintenance and surveys. Rated to a depth of 300 m, the underwater thickness gauge provides an accurate metal thickness measurement that is required to ascertain corrosion levels and wastage through coatings up to 20mm thick (when in 'Deep-Coat' mode). The large bright LED display ensures easy viewing even in poor visibility conditions.

The Cygnus Instruments Underwater Thickness Gauge is supplied ready to use as a complete kit with 2 rechargeable batteries in a protective carry case.
